

AEDtrax

AEDtrax helps ensure that your ZOLL AED 3® is ready for use when it's needed. Reliable mobile connectivity enables you to manage and monitor your AEDs from any location — even outside WiFi zones and in rural and remote areas.

GPS* and environmental tracking* means you can find your device on a map, be automatically notified if it's used, and know if any harmful conditions exist in its environment.

IoT external communication module for ZOLL AED 3

- Unlike embedded connectivity solutions, AEDtrax provides independent, external functionality for rescue readiness
- Little to no impact on AED battery performance
- Five-year battery life

24/7 readiness monitoring

- AEDtrax monitors device readiness and will alert the program manager should a device need attention

Instant deployment alerts*

- Receive automatic customizable notifications when AED is deployed

Enhanced monitoring & tracking* to ensure complete visibility of AED location and conditions

- Instant deployment notifications through RFID technology
- Movement tracking via GPS
- Movement notifications (non-GPS)

Environment monitoring*

- Humidity
- Temperature
- Pressure

Case management

- Cellular transmission of case data following use

**Features available following initial release*
