

Emergency Eyewash

That You Can Count On

The PhysiciansCare eyewash stations ensure OSHA 29 CFR 1910.151 compliance, offering quick response to eye accidents. Designed as secondary stations, they meet OSHA's requirement for eye flush accessibility within a 10-second walk from hazardous materials. Their compact size allows strategic placement near danger zones, and the removable bottles facilitate portable use for immediate response and subsequent transport to a medical facility.

- Sterile, isotonic eye flush solution
- Single, double, and triple stations
- Portable eye wash bottles for on-site use
